Explain and delve on the topic "interrogative framework". List 2 examples

Sure! The "interrogative framework" is a systematic approach to information gathering and problem-solving that involves asking a series of foundational questions. These questions are designed to uncover all relevant aspects of a topic or situation. The main components of the interrogative framework are the "5 Ws" (who, what, when, where, why) and often "how."

Components of the Interrogative Framework:

1. **Who** - Identifies the people or entities involved.
2. **What** - Determines the event, action, or subject of interest.
3. **When** - Establishes the timing or timeline of the event.
4. **Where** - Locates the geographical or situational context.
5. **Why** - Uncovers the reasons, motivations, or causes.
6. **How** - Explains the manner, method, or process by which something happens.

By asking these questions, you can ensure a thorough understanding of any situation, issue, or topic. This framework is widely used in journalism, research, education, and various professional fields to ensure comprehensive and accurate information gathering.

Examples:

1. **Journalism: Reporting a News Event**

- **Who:** The main individuals involved in the news event (e.g., politicians, celebrities, civilians).
- **What:** The nature of the event (e.g., a political rally, a natural disaster, a public announcement).
- **When:** The date and time when the event occurred.
- **Where:** The location where the event took place.
- **Why:** The reasons behind the event (e.g., policy changes, significant anniversaries, natural causes).
- **How:** The process or circumstances of the event (e.g., the sequence of events, the response from authorities).

2. Research: Conducting a Case Study

- **Who:** The subjects or participants of the study (e.g., a specific group of people, animals, organizations).
- **What:** The focus or topic of the study (e.g., behavioral patterns, effectiveness of a new drug, market trends).
- **When:** The time period during which the study is conducted.
- **Where:** The setting or environment of the study (e.g., a laboratory, a specific region, a workplace).
- **Why:** The purpose or objectives of the study (e.g., to understand a phenomenon, to test a hypothesis, to develop a theory).
- **How:** The methodology used in the study (e.g., surveys, experiments, observations, data analysis).

The interrogative framework helps ensure that all crucial aspects are covered, leading to a well-rounded and comprehensive understanding of the topic at hand.
