Download Tailscale

```
sudo apt-get install tailscale
```

```
curl -fsSL https://tailscale.com/install.sh | sh
```

Thanks for sharing the output, Rigel! The Tailscale installation script itself seems to have run fine, but the error you're seeing is related to an **unrelated PPA** ( `brightbox/ruby-ng` ) that's failing during `apt-get update` . Here's a breakdown and how to fix it:

## ✅ Tailscale Installation Status

- The Tailscale repository for **Ubuntu Noble** was added successfully.
- No errors from Tailscale itself.
- You can now try running:

```
sudo apt-get install tailscale
```

## ⚠️ Error Explanation

The error:

```
E: The repository 'https://ppa.launchpadcontent.net/brightbox/ruby-ng/ubuntu noble Release' does not have a Release file.
```

means that the Brightbox Ruby PPA does **not support Ubuntu 24.04 "Noble"** yet.

This is causing `apt-get update` to fail partially, which can affect other installations.

---

## Fix Options

### Option 1: Remove the broken PPA

If you don't need Ruby from Brightbox:

```
sudo add-apt-repository --remove ppa:brightbox/ruby-ng
sudo apt-get update
```

### Option 2: Disable the PPA temporarily

Edit the file:

```
sudo nano /etc/apt/sources.list.d/brightbox-ruby-ng-ubuntu.list
```

Add a `#` at the beginning of the line to comment it out.

---

## Other Warnings

You also got this:

```
W: ... Key is stored in legacy trusted.gpg keyring ...
```

This is just a **deprecation warning**. You can ignore it for now, or migrate keys to `/etc/apt/trusted.gpg.d/` if you want to clean up.

---

Would you like help installing Tailscale now or cleaning up other PPAs and keys on your system?
