Calculate the delta and final amount of my etf sale of 30 shares at \$222 vs \$231 in dollars and %. sow in table with 30, 50, 60 shares.

Here's the calculation clearly laid out.

ETF Sale Comparison: \$222 vs \$231

Shares	Proceeds @ \$222	Proceeds @ \$231	Delta (\$)	Delta (%)
30	\$6,660	\$6,930	\$270	4.05%
50	\$11,100	\$11,550	\$450	4.05%
60	\$13,320	\$13,860	\$540	4.05% Key Takeaway

- The price move from \$222 → \$231 is a \$9 increase per share, which equals a 4.05% gain, regardless of share count.
- Dollar impact scales linearly with shares:
 - Every 10 shares = \$90 difference.

If you want, I can also show:

- after-tax impact,
- opportunity cost vs holding,
- or how this compares to a typical ETF's annual return.
